Strategic Planning for Suicide Prevention

Learning Module 4: Putting Planning Into Action
Setting Goals, Engaging the Community, & Selecting Interventions

Know the Signs >> Find the Words >> Reach Out

Funded by counties through the voter-approved Mental Health Services Act (Prop. 63)

Welcome!

- If you called in on the phone, find and enter your audio PIN
- If you have a question, technical problem or comment, please type it into the “chat” box or use the icon to raise your hand.

✓ Jana Sczersputowski, MPH

Jana Sczersputowski applies her public health background to deliver community-driven and behavior change oriented communication solutions in the areas of mental health, suicide prevention, child abuse prevention and other public health matters. She is specialized in strategic planning, putting planning into action, and evaluating outcomes. Most of all she is passionate about listening to youth, stakeholders and community members and ensuring their voice is at the forefront of public health decision making impacting their communities.

✓ Anara Guard

Anara Guard has worked in suicide and injury prevention since 1993. For the past eight years, she has been a subject matter expert advising Know the Signs and other suicide prevention projects. Previously, she was deputy director at the national Suicide Prevention Resource Center where, among other duties, she led the development of annual grantee meetings for SAMHSA's suicide prevention grantees and oversaw technical assistance.

✓ Rosio Pedroso

Rosio Pedroso has over 20 years of research and evaluation experience focusing on unserved and underserved communities. She has over six years of experience conducting train the trainer curriculum and materials for community engagement and statewide campaigns including suicide prevention and child abuse and neglect awareness.

✓ Stan Collins

Stan Collins, has worked in the field of suicide prevention for nearly 20 years. Stan is a member of the American Association of Suicidology's Communication team and in this role supports local agencies in their communications and media relations related to suicide. In addition, he is specialized in suicide prevention strategies for youth and in law enforcement and primary care settings.

✓ Sandra Black, MSW

Sandra Black has worked in suicide prevention in California since 2007. Until 2011 she managed the California Office of Suicide Prevention, which included completion and implementation of the California Strategic Plan on Suicide Prevention.

Strategic Planning Learning Collaborative Overview

Webinar 4: Putting Planning into Action:

- Tuesday, March 12th 10:30am-12pm

Steps of Strategic Planning

Based on the Steps of Strategic Planning Framework from the Suicide Prevention Resource Center (SPRC).

Develop Your Goals and Objectives

Why Should You Create Goals and Objectives?

Specific

Measurable

Achievable

Relevant

Timed

Challenging

Behavioral Objectives

Look at changing the behaviors of individuals (what they are doing and saying) and the products (or results) of their behaviors.

- Increase the number of medical providers who will screen patients for depression by 50% resulting in an increase in individuals that are identified at risk and referred to mental health services.

Community Level Objectives

These are the result of behavior change in many people.

- Using 2016 suicide data of 44 total suicide deaths as a baseline, the goal is to reduce suicide deaths in Solano County by 10% in five years, 20% in ten years with an ultimate goal to work towards zero suicide deaths.
- As measured by an annual population survey, 100% of our community will agree with the statement, "I am confident in my ability to discuss suicide with someone I care about."

Process Objectives

Refer to the implementation of activities necessary to achieve other objectives.

- Attend medical society meetings to begin to survey and engage medical providers in providing feedback as to the importance of screening for depression.

Solano County

Using the 2014 suicide attempt data of 643 total attempts as a baseline, the goal is to reduce suicide attempts in Solano County by 5% in five years and 10% in ten years.

Using 2016 suicide data of 44 total suicide deaths as a baseline, the goal is to reduce suicide deaths in Solano County by 10% in five years, 20% in ten years with an ultimate goal to work towards zero suicide deaths.

Tulare and Kings County

Goal/Objective	Activities/Strategies
Goal 2: Implement community education and information campaign and public awareness	
<u>Objective #1:</u> Increase the number of medical providers who will screen patients for depression by 50%.	<ul style="list-style-type: none">• Attend medical society meetings to begin to survey and engage medical providers in providing feedback as to importance of screening for depression.• Analyze feedback from medical providers, and develop curriculum to address findings.• Delivery training to medical providers via medical society meetings and other forums.
<u>Objective #2:</u> Increase the number of medical providers who will include, as part of depression screening, questions to patients about suicide.	<ul style="list-style-type: none">• Attend medical society meetings to begin to survey and engage medical providers in providing feedback as to importance of screening for depression including questions regarding suicide.• Analyze feedback from medical providers, and develop curriculum to address findings.• Delivery training to medical providers via medical society meetings and other forums.
<i>What does success look like?</i>	<i>Increase in referrals made by medical providers in response to depression screenings, including suicide.</i>

San Mateo County

STRATEGY 4:

Improve Suicide Prevention Program Effectiveness and Accountability

Desired Outcomes for Strategy 4:

INCREASE local capacity for data collection, reporting, surveillance and dissemination regarding suicide.

BUILD local capacity to evaluate suicide prevention programs.

ESTABLISH AND ENHANCE capacity of forensic and clinical reviews of suicide deaths.

WORK with San Mateo County Coroner's Office to enhance consistency and accuracy of reported suicide deaths.

Future Recommended Activities for Strategy 4:

- Develop system for accurately tracking and reporting.
- Create tracking system to capture number of people trained and where they work.
- Identify a position to be in charge of data collection to improve suicide prevention in the county.
- Research what other counties/states are doing for data collection and evaluation and create a data collection plan.
- Evaluate effectiveness of suicide prevention services.
- Develop more formal forensic review within the San Mateo County.
- Work with San Mateo County Coroner's Office to improve classifications of suicides and suicide deaths.

Organizations and Programs Addressing Strategy 4:

San Mateo County Psychological Autopsies

San Mateo County Child Death Review Team (CDRT)

See Appendix E for Organization and Program descriptions, individuals served and contact information.

Know the Signs Baseline Data

Figure C. Suicide Prevention Resource Items.

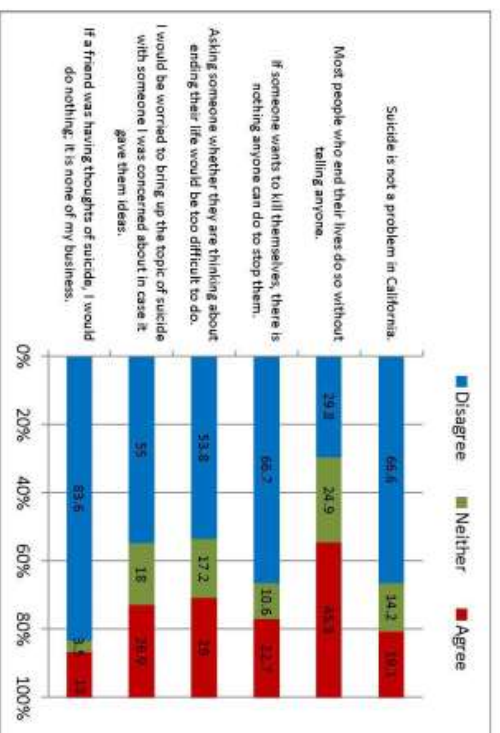

Figure B. Knowledge, Efficacy and Action Items: Disagreement Desirable.

87.8% of districts have a board approved suicide youth prevention policy.

A strong suicide prevention policy

56% provided some type of suicide prevention training to all staff in the last 12 months?

67% provided training to individuals identified to conduct suicide risk assessments.

Protocols for helping students at risk

Staff education and training

Parent education and training

Student education and engagement

44% offer trainings or curricula on suicide prevention to students.

80% have a section addressing suicide prevention as part of their crisis intervention plan and/or School Safety Plan.

46% have offered a suicide prevention event for parents.

Based on partial responses, survey still open

By June 2025, 100% of districts will answer “yes” to these questions

COMMUNITY TOOL BOX

Identify Risk and Protective Factors

Individuals

Protective Factor: Coping and problem solving; reasons for living (e.g. children in the home); moral or religious objections to suicide; restrictions on access to lethal means

Risk Factor: History of depression and other mental illness; substance abuse; previous suicide attempt; personality features (aggression, impulsivity); hopelessness, certain health conditions, trauma, exposure to violence (victimization and perpetration); genetic and biological determinants

Relationships

Protective Factor: connectedness to others; supportive relationships with health and mental health care providers;

Risk Factor: high conflict or violent relationships; family history or loss of someone to suicide; isolation and lack of social support; financial and work stress

Community

Protective Factor: safe and supportive schools, workplaces, community environments; sources of continued care for health and behavioral health issues; support after suicide; restrictions on access to lethal means

Risk Factor: Few supportive relationships; Barriers to health and behavioral health care

Society

Protective Factor: availability of appropriate and effective health and BH care; restrictions on access to lethal means

Risk Factor: ready availability of lethal means; unsafe media and public portrayals of suicide; stigma associated with help-seeking and mental illness

Suicide Ideation Risk Factors

LA County School District Comparison, 2017-2018

During the past 12 months, did you ever seriously consider attempting suicide? (Below percentages indicate "yes" to this question)

Gender

Female

Sexual Orientation

Gay/Lesbian/Bisexual

Parent/Guardian Military Status

In Military

Free/Reduced Meal

Free/reduced-price meal eligible

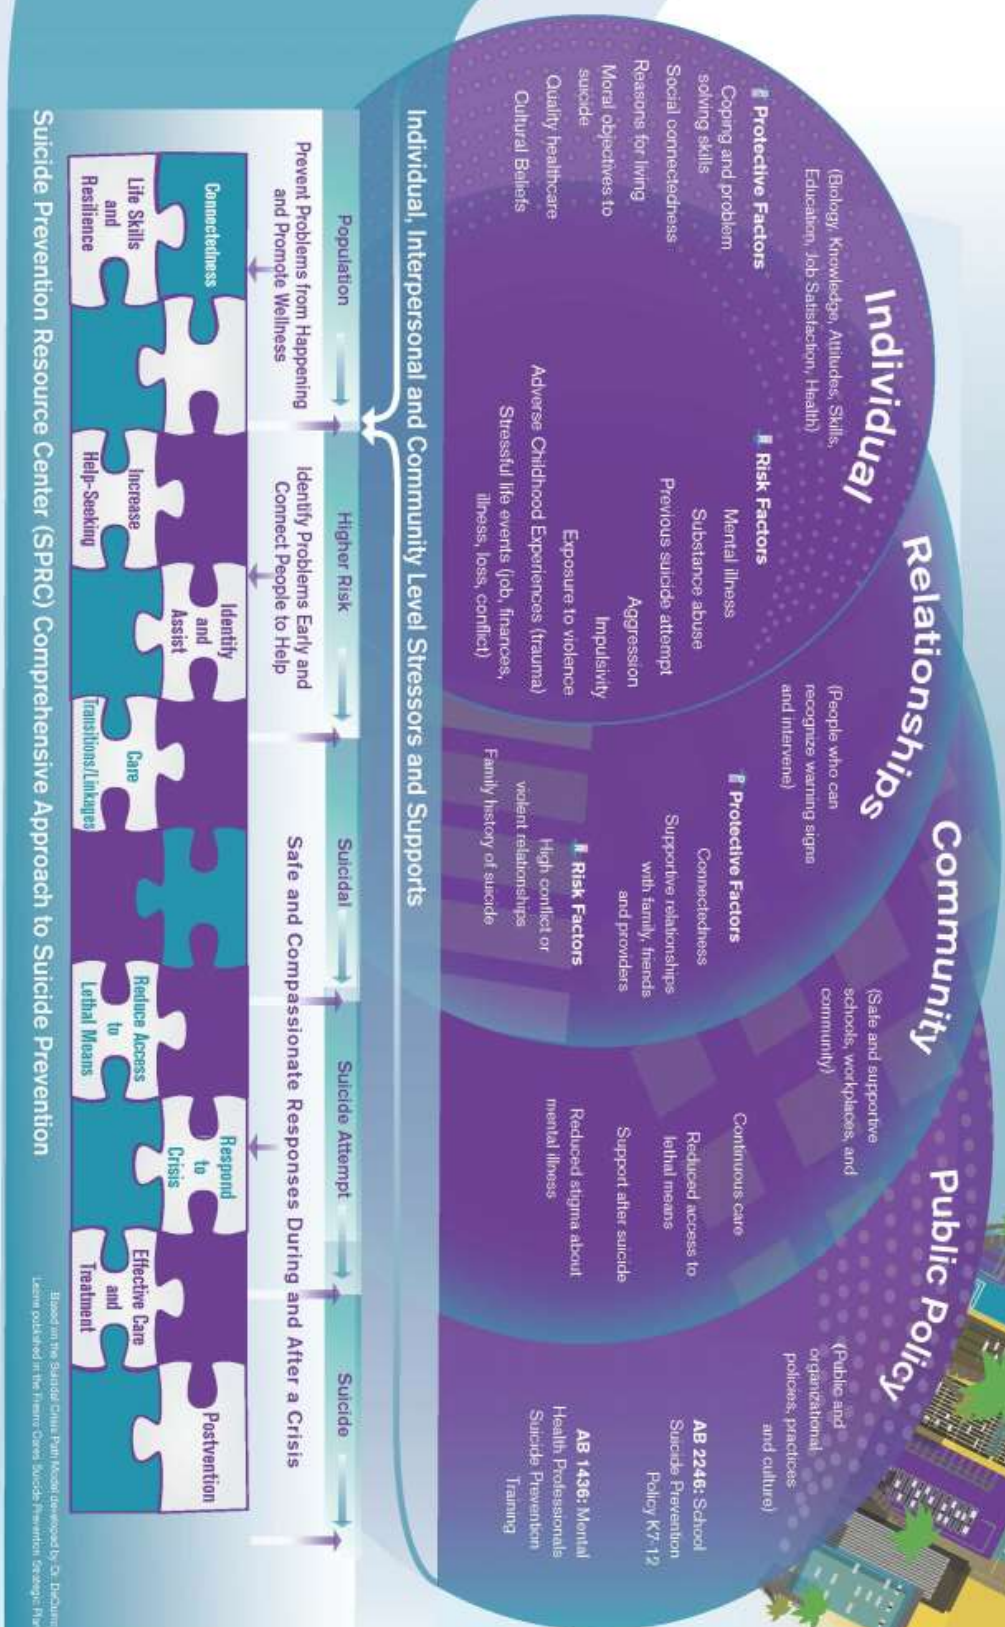

- Data not available
The five school districts listed had the greatest proportion of students who answered yes when asked about suicide ideation for the 2017-18 survey

LA County Average: 15%

Los Angeles Suicide Ideation County average: 2015-2017

Ecological Model and Approach for a Comprehensive Suicide Prevention Approach in Los Angeles County

Suicide Prevention Resource Center (SPRC) Comprehensive Approach to Suicide Prevention

Based on the Suicide Cycle from research reviewed by Dr. Padanilam. Adapted and published in the Francis Davis Suicide Prevention Strategy Plan.

Engaging the Community

Steering Committee and/or Workgroups (guided by coalition)

- Review your local suicide data
- Identify priority populations
- Gather additional data
- Resource Mapping
- System mapping
- Draft goals and objectives
- Research evidence-based interventions

Community Meetings

- Review data
- Agree on goals and objectives
- Review recommended interventions (suggested to use a set of objective criteria to guide discussion)
- Prepare action plan

Planning Steps

The planning team designed and facilitated the committee process in a manner that the group followed ten planning steps in preparing the plan. It was agreed that the initial phase of plan development would focus on high level recommendations that would be further shaped into an implementation plan once approved. The planning steps are listed below:

1. Established plan goals
2. Identified personal values and guiding principles
3. Reviewed local, state and national data on suicide

7. Organized recommendations into five overarching strategies
8. Held a public forum for dialogue and input on the committee work
9. Incorporated the public input into the plan
10. Adopted a finalized plan for Mental Health Board review and Board of Supervisors approval.

4. Brainstormed needs across the lifespan
5. Aligned needs by age to available data, risk populations, and potential strategies
6. Identified additional plan strategies beyond those that are age and population-related

An Overview of Interventions

Effective suicide prevention

Preventing Suicide	
Strategy	Approach
Strengthen economic supports	<ul style="list-style-type: none"> • Strengthen household financial security • Housing stabilization policies
Strengthen access and delivery of suicide care	<ul style="list-style-type: none"> • Coverage of mental health conditions in health insurance policies • Reduce provider shortages in underserved areas • Safer suicide care through systems change
Create protective environments	<ul style="list-style-type: none"> • Reduce access to lethal means among persons at risk of suicide • Organizational policies and culture • Community-based policies to reduce excessive alcohol use
Promote connectedness	<ul style="list-style-type: none"> • Peer norm programs • Community engagement activities
Teach coping and problem-solving skills	<ul style="list-style-type: none"> • Social-emotional learning programs • Parenting skill and family relationship programs
Identify and support people at risk	<ul style="list-style-type: none"> • Gatekeeper training • Crisis intervention • Treatment for people at risk of suicide • Treatment to prevent re-attempts
Lessen harms and prevent future risk	<ul style="list-style-type: none"> • Postvention • Safe reporting and messaging about suicide

Effective suicide prevention strategies

- Early recognition and treatment of depression
- Cognitive Behavioral Therapy for Suicide Prevention
- Dialectical Behavioral Therapy
- Collaborative Assessment and Management of Suicidality
- Caring Contacts
- Early intervention, e.g. Good Behavior Game, PIER model
- Safety planning
- Suicide prevention hotlines
- Counseling on Access to Lethal Means
- Gatekeeper training

Appendix: Summary of Strategies and Approaches to Prevent Suicide

Strategy	Approximate Prevalence of Policy	Local Available Systems			Level Sector*
		Schools	Universities or Healthcare	Other (e.g., Nonprofits, Schools)

The US Air Force Suicide Prevention Program: Implications for Public Health Policy

Kerry L. Knox, PhD,¹ Steven Plianz, MD, Gerald W. Talcott, PhD, Rick L. Campise, PhD, Jill E. Lavigne, PhD, Alina Bajorska, MS, Xin Tu, PhD, and Eric D. Caine, MD

“The AFSPP effectively prevented suicides in the US Air Force. The long-term effectiveness of this program depends upon extensive implementation and effective monitoring of implementation. Suicides can be reduced through a multilayered, overlapping approach that encompasses key prevention domains and tracks implementation of program activities.”

GARRETT LEE SMITH YOUTH SUICIDE EARLY INTERVENTION AND PREVENTION STRATEGIES NATIONAL OUTCOMES EVALUATION

**Fiscal Year 2017
Report to Congress**
June 2018

Highlights along the Pathway to Care

State and tribal GLS grantees have identified 60,564 youth as at risk for suicide through trained gatekeepers or screenings.

Nearly all youth identified as at risk for suicide were referred for services (86 percent*; n = 46,803/54,708).

Eighty seven percent* of those referred to mental health services, and for whom data are available, had received services within 3 months of the referral (n = 30,784/35,209).

Exhibit 12. Difference between observed youth suicide rate and estimated rate in absence of the GLS Programs in rural counties

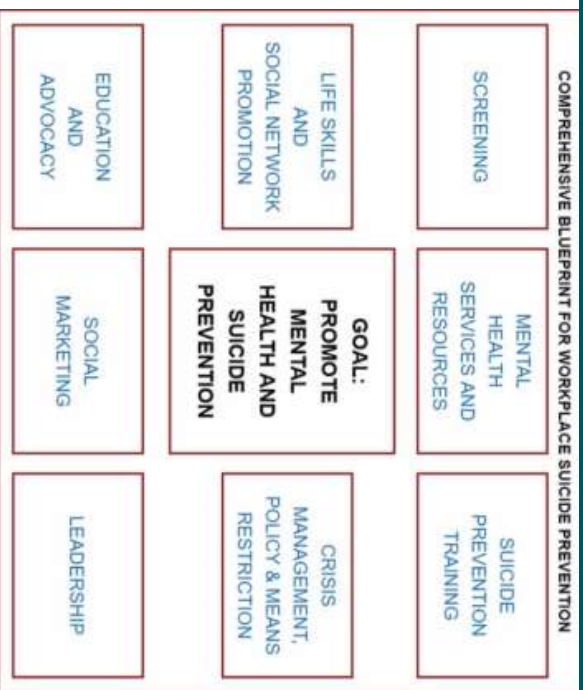

As of June 2017, Campus, State, & Tribal Grantees

Trained 1,304,600 people

Implemented 35,301 training activities

National initiatives based on effective approaches-Workplaces

PRE-ACTION PLAN

The guide is divided into three sections:

- Part I** is about **UPSTREAM** tactics - What do we need to do to **bolster** protective factors and prevent mental health problems from surfacing in the first place?
- Part II** covers **MIDSTREAM** tactics - How do we **identify** employees who may be facing overwhelming life challenges or who are in the early stages of a mental health or substance abuse problem?
- Part III** suggests **DOWNSTREAM** tactics - What do we need to do to **respond** effectively when mental health or suicide crises occur?

State-by-State Study Links Gun Ownership with Youth Suicide

February 15, 2019

News Type: Weekly Spark, Weekly Spark News

NBC News

Household gun ownership may be associated with youth suicide risk, according to a recent study. Researchers looked at state data on household gun ownership from 2004, and suicide rates among people ages 10 to 19 over the following decade. They found that states with high rates of gun ownership had higher rates of youth suicide. "Those states should be aware of this link, the researchers concluded. "Because states with high levels of household gun ownership are likely to experience higher youth suicide rates, these states should be especially concerned about implementing programs and policies to ameliorate this risk," said Michael Siegel, lead author and public health specialist at Boston University School of Public Health.

EVIDENCE-BASED PRACTICES RESOURCE CENTER

Evidence-Based Practices Resource Center

SAMHSA is committed to improving prevention, treatment, and recovery support services for mental and substance use disorders.

This new Evidence-Based Practices Resource Center aims to provide communities, clinicians, policy-makers and others in the field with the information and tools they need to incorporate evidence-based practices into their communities or clinical settings. The Resource Center contains a collection of scientifically-based resources for a broad range of audiences, including Treatment Improvement Protocols, toolkits, resource guides, clinical practice guidelines, and other science-based resources.

Evidence-Based Prevention

Practicing evidence-based prevention means using the best available research and data throughout the process of planning and implementing your suicide prevention efforts.

Evidence-based prevention includes:

- Engaging in evidence-based practice (sometimes called evidence-based public health)
- Selecting or developing evidence-based programs

Engaging in Evidence-Based Practice

Evidence-based practice has been defined as "the conscientious, explicit, and judicious use of current best evidence in making decisions about the care of communities and populations in the domain of health protection, disease

prevention, health maintenance, and improvement of health promotion."¹
